## COTTON QUALITY - UNITED STATES 1995 Crop

Color 31 was the predominant color of upland cotton classed from the 1995 crop and accounted for 33 percent of classings, according to the Cotton Division, Agricultural Marketing Service, USDA. Color 31 was predominant in 1994 and made up 31 percent of classings. Color 41 and better made up 76 percent of classings from the 1995 crop and compares with 66 percent in 1994 and 77 percent in 1993. All white color grades accounted for 77 percent of the 1995 crop, up from 69 percent in 1994 and down from 79 percent two years ago. Light Spotted color grades comprised 22 percent of classings compared with 30 percent in 1994 and 20 percent in 1993. Spotted color grades made up about 1 percent of classings this season compared with 2 percent a year earlier and the same as in 1993. Tinged, Stained and Below color grades accounted for less than 1 percent of classings this season, the same as in the past two years.

<u>Leaf</u>. The predominant leaf of cotton classed from the 1995 crop was leaf 3, accounting for 47 percent of total upland classings. Leaf 3 was predominant a year earlier making up 50 percent of classings. Leaf 2 comprised the next highest percentage at 31 percent of classings against 23 percent in 1994. Leaf 4 made up 16 percent of classings from this year's crop compared with 19 percent a year ago. Leaf 5-7 made up about 3 percent of classings, down from 6 percent last year.

Staple. The average staple length of upland cotton classed from the 1995 crop was 35.0 thirty-seconds inches, down from 35.2 last year and was the same as in 1993. The predominant staple length was 35, making up 31 percent of classings this season. Staple 36 was the predominant length the past two years accounting for 28 percent of classings last year and 27 percent two years ago. Staples 31 and shorter comprised 1 percent of classings this season, down from 2 percent in both 1994 and 1993. Staples 32 and 33 made up 11 percent compared with 10 percent last year and 14 percent two years ago. Staples 34 and 35, at 52 percent, was up from 43 and 42 percent in 1994 and 1993, respectively. Staples 36 and longer made up 36 percent of classings this season, the smallest percentage since the 1990 crop. In 1994, staples 36 and longer accounted for 45 percent of classings and in 1993, 43 percent.

Mike. The average mike of upland cotton classed from the 1995 crop was 44 against 42 in 1994 and the same as in 1993. Cotton with mike 34 and lower made up 7 percent of classings and compares with 5 percent in 1994 and 3 percent in 1993. Cotton miking 35 through 49 comprised 80 percent of classings this season, the smallest percentage since 1989, and was down from 91 percent last year and 86 percent two years ago. Cotton with mike 50 and higher, at 13 percent, made up the largest percentage in this range since 1977, and was up from 5 percent in 1994 and 10 percent in 1993.

Strength. The average fiber strength of upland cotton classed from the 1995 crop was 29.1 grams per tex. This was the strongest average since records began in 1980 and compares with 28.5 in both 1994 and 1993. Strengths in the 19 and lower range accounted for less than 1 percent of classings, the same as in 1994 and 1993. About 1 percent of classings had strengths in the 20 to 23 range, about the same as in the two previous years. Cotton with strengths of 24 to 27 accounted for 25 percent of classings this season against 37 percent last year and 33 percent two years ago. Strengths in the 28 and higher range comprised 75 percent of classings, up from 62 percent a year ago and 66 percent two years earlier.

American Pima cotton classed from the 1995 crop contained a larger proportion of higher grades than last year but a smaller proportion of longer staples. Grades 3 and better accounted for 93 percent of classings up from 89 percent last year and 90 percent two years ago. Grade 2 was the predominant grade this season comprising 62 percent of classings. Grade 3 was the predominant grade in 1994 at 48 percent and in 1993 at 54 percent. Grades 4 and lower made up 7 percent of classings this season against 11 percent last year and 10 percent two years ago. The average staple length was 45.5 thirty-seconds inches compared with 45.8 and 45.7 in 1994 and 1993, respectively. Staple 46 was the predominant length comprising 63 percent of classings this season, 71 percent in 1994 and 66 percent in 1993. Average mike was 37, down from 40 in the two previous years.

Ginnings of 1995-crop cotton in the United States totaled 17,498,800 running bales, according to a preliminary report by the Agricultural Statistics Board, National Agricultural Statistics Service, USDA. This total includes 17,144,150 bales of upland and 354,650 bales of American Pima cotton. The number of active cotton gins for crop year 1995 was 1,275, compared with 1,306 in 1994 and 1,364 for the 1993 crop year.

<sup>1/</sup> A measure of the relative uniformity of the length of fibers; if all fibers were the same length uniformity index would equal 100. 2/ A measure of the percent of the sample surface covered by trash particles as determined by a video scanner; 12 indicates that trash particles cover 1.2 percent of the sample surface. Trash particles include extraneous matter such as grass, bark, etc. \* Less than 0.05 percent.

Average trash	0.31	0.33	0.32	0.48	0.46	0.52	0.48	0.29

<sup>1/</sup> A measure of the relative uniformity of the length of fibers; if all fibers were the same length uniformity index would equal 100. 2/ A measure of the percent of the sample surface covered by trash particles as determined by a video scanner; 12 indicates that trash particles cover 1.2 percent of the sample surface. Trash particles include extraneous matter such as grass, bark, etc. \* Less than 0.05 percent.
